Gorilla Glue 25 to 30%

Brand: EQ Wellsness CBD
Product Code: Gorilla Glue 25 to 30%

Price: $0.00

Short Description

Gorilla Glue

Gorilla Glue, also known as GG4 or Original Glue, is a highly popular and potent cannabis strain recognized for its high THC content, often exceeding 25-30%. This strain is a hybrid, typically described as indica-dominant, though some analyses show it as slightly sativa-dominant

Gorilla Glue was created by crossing Chem's Sister, Sour Dubb, and Chocolate Diesel strains. Its name derives from the extremely sticky resin produced by its trichome-rich buds. These trichomes are responsible for the strain's potent effects and distinctive aroma profile, described as earthy, piney, with hints of diesel, coffee, and chocolate.

THC Content often exceeding 25-30%

Gorilla Glue was created by crossing Chem's Sister, Sour Dubb, and Chocolate Diesel

strains. Its name derives from the extremely sticky resin produced by its trichome-rich buds. These trichomes are responsible for the strain's potent effects and distinctive aroma profile, described as earthy, piney, with hints of diesel, coffee, and chocolate.

THC Content often exceeding 25-30%

Gorilla Glue is frequently used to produce various cannabis concentrates, including:

- Shatter: A brittle, translucent concentrate resembling glass.
- Wax and Budder: Concentrates with a soft, wax-like consistency, which can be further categorized as crumble, sugar, or budder depending on their specific texture.
- Live Resin: Made from flash-frozen, freshly harvested plants, preserving a fuller terpene profile and flavor.
- Rosin: A solventless concentrate created by applying heat and pressure to the plant material.
- Distillate: A highly refined, potent liquid concentrate often used for vaping or edibles.
- Hashish: A traditional concentrate made by compressing trichomes.
